

Dr. Aaron Hauptman is a pediatric and adult neuropsychiatrist. He is the Associate Director of Neuropsychiatry at the Kennedy Krieger Institute in Baltimore and an assistant professor at the Johns Hopkins University School of Medicine. Dr. Hauptman works with children and their families struggling with emotional, cognitive and behavioral symptoms due to a broad range of developmental and acquired central nervous system disorders, such as neuroimmunological conditions, cerebral palsy, neurogenetic syndromes, pediatric neurodegenerative disorders and other diagnoses. He is also dedicated to training the next generation of clinicians working in this underserved field. For more information, visit
